

We claim:

1. A box with a pocket for an illustrative leaflet and formed from a single piece of punched and crease-lined cardboard or the like, comprising:
 - 5 - at least four main panels and at least three supplementary panels, all consecutive, separated one from another by parallel longitudinal folding lines, the first of said main panels being superposed on and glued to the first of the supplementary panels in the finished box,
 - 10 - at least two panels for closing the two ends of the box and projecting from the ends of at least one of the main panels from which they are separated by transverse folding lines substantially perpendicular to said longitudinal folding lines,wherein the supplementary panels are four in number, the last of them
15 being separated from the supplementary panel adjacent to it by a folding line parallel to said longitudinal folding lines, the width of said last supplementary panel being less than the width of the last main panel from which the supplementary panels extend, the width of those two supplementary panels adjacent to the last supplementary panel being
20 overall less than the total width of the last main panel and of the first supplementary panel consecutive to it, the supplementary panels being folded into the box, the last supplementary panel being glued to the inside of the last main panel, and the first main panel being glued to the first supplementary panel on which it is superposed inside the box, the
25 supplementary panels forming with the adjacent main panels a corner pocket in which said illustrative leaflet is housed.
2. A box as claimed in claim 1, wherein the second

supplementary panel is glued at one end to the overlying adjacent main panel of the box.

3. A sheet in the form of a single piece of punched and crease-lined cardboard or the like for forming a box having the features
5 resulting from one or more of the preceding claims.
